

Introduction to Machine Learning

What is Machine Learning?

Machine learning is a field of computing in which algorithms learn patterns from data and use those patterns to make predictions or decisions.

Training and Testing

A dataset is commonly divided into training and testing portions. Training data is used to learn model parameters, while testing data is used to evaluate performance on unseen examples.

Model Evaluation

Common evaluation measures include accuracy, precision, recall, and mean squared error. The appropriate metric depends on the type of problem.
